

DRVS EHR Plug-In

SIGN IN TO DRVS WITHOUT EXITING THE EHR

Seamless workflow integration for Azara DRVS within the EHR application

Providers and care team members who desire access to their DRVS data at the point of care can implement the EHR Plug-In to avoid digging through the patient chart while signing on to multiple systems. The DRVS EHR Plug-In also gives users quick access to the actionable information found on the Patient Visit Planning (PVP) report and is used by clients to address care gaps and remind providers of other items required for the patient.

Key Benefits

- Provides a holistic patient view by allowing direct access to patient information, such as overdue vaccinations, screenings, and a variety of other clinical alerts while in the patient's electronic chart.
- Enables transparency into open referrals—allowing providers to view outstanding referrals and assist the patient in progressing toward completing the recommended activity.*
- Simplify administrative burdens—the RAF Gaps tab helps surface opportunities for providers to address open RAF Gaps at the point of care.

Diagnosis Category	Context/Actions	Billed CY	Unbilled CY
Diabetes	Dx Not Billed Add to Chg Next Visit		EHR: F35 (03/15/25)
Infectious	Dx Not Billed Add to Chg Next Visit		EHR: B20 (03/15/25)
Pulmonary	Dx Not Billed Add to Chg Next Visit		EHR: J80 (03/15/25)

*The Referrals Module is an additional product. Contact your Azara representative for additional details.
